

DBSE Transactions

The screenshot shows the MySQL Workbench interface. The SQL editor contains two statements: `CREATE DATABASE workplace_db;` and `USE workplace_db;`. The Output window shows the execution results:

#	Time	Action	Message	Duration / Fetch
1	13:49:26	CREATE DATABASE workplace_db	1 row(s) affected	0.016 sec
2	13:49:46	CREATE DATABASE workplace_db	Error Code: 1007. Can't create database 'workplace_db'; database exists	0.000 sec
3	13:49:51	USE workplace_db	0 row(s) affected	0.000 sec

The transaction failed at the second statement because the database already exists.

The screenshot shows the MySQL Workbench interface. The SQL editor contains four statements: `CREATE DATABASE workplace_db;`, `USE workplace_db;`, `CREATE TABLE Departments (`, `dept_id INT PRIMARY KEY,`, `dept_name VARCHAR(50)`, and `);`. The Output window shows the execution results:

#	Time	Action	Message	Duration / Fetch
1	13:49:26	CREATE DATABASE workplace_db	1 row(s) affected	0.016 sec
2	13:49:46	CREATE DATABASE workplace_db	Error Code: 1007. Can't create database 'workplace_db'; database exists	0.000 sec
3	13:49:51	USE workplace_db	0 row(s) affected	0.000 sec
4	13:51:04	CREATE TABLE Departments (dept_id INT PRIMARY KEY, dept_name VARCHAR(50))	0 row(s) affected	0.031 sec

The transaction was successful as the table was created without errors.
